Complete Left: April 14, 1925.

Complete Accepted: Sept. 10, 1925.

PROVISIONAL SPECIFICATION.

Improvements in or relating to Firelighters.

I, WILLIAM REED, Carpenter, No. 275, Cambridge Road, London, E. 2, British subject, do hereby declare the nature of this invention to be as follows:—

5 To be made in garden basket form and to be composed of wood, sticks and coal.

The wood & the coal to be coated with a spirit, and shellac or rosin substance or gums. The coating to be done by brush or dipping.

Dated this 16th day of February, 1925.

WILLIAM REED.

COMPLETE SPECIFICATION.

Improvements in or relating to Firelighters.

I, WILLIAM REED, Carpenter, 275, Cambridge Road, London, E. 2, British subject, do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:—

20 This invention is a firelighter consisting of a basket, made as here in after described, containing coal which has been coated with enamel made by mixing spirit with shellac or rosin or gums.

25 The basket is made from a base piece, with four square uprights at the corners to act as dowels for cross pieces, so that after the parts have been assembled the whole can be secured by ten nails.

30 In the accompanying drawings

Fig. 1 is a plan view of the basket.

Fig. 2 is an elevation of the improved lighter.

Fig. 3 is a side elevation of the lighter.

35 Fig. 4 shows isometric views of parts to be fitted to the improved lighter.

The improved lighter may be built, raised up to suitable level as shown in Fig. 1 and 2, of any desired size, the back, two sides and front with bottom to be made in garden basket form. A the

foundation piece, B showing the side sticks and C the sticks for the front and back. D is the top piece secured in position with nails. E are the dowels to unite the sticks. F are the nails to fasten and to keep the lighter together.

To produce my invention I make my wood-work basket and stain this container with a spirit stain in any colour or 50 shades.

The reason why the square dowels are to be used is that the friction is not so great and their employment will result in a great saving of time and material 55 which must be studied in the production.

Having now particularly described and ascertained the nature of my said invention and in what manner the same is to be performed, I declare that what I 60 claim is:—

A firelighter consisting of a basket made substantially as described and containing coal which has been coated with enamel made by mixing spirit with 65 shellac, rosin, or gums.

Dated the 26th day of June, 1925.

WILLIAM REED.
